

Problem 20

Problem 1. $\forall L \in \text{NatList}, \text{setEqual}(L, \text{rev}(L)) = \text{true}$.

Proof. By structural induction on L .

(1) Base case

What to show: $\text{setEqual}(\text{nil}, \text{rev}(\text{nil})) = \text{true}$
 where $l \in \text{NatList}$.

$$\begin{aligned}
 \text{setEqual}(\text{nil}, \text{rev}(\text{nil})) &\longrightarrow \text{setEqual}(\text{nil}, \text{nil}) && \text{(by rev1)} \\
 &\longrightarrow \underline{\text{diff}(\text{nil}, \text{nil}) = \text{nil}} \text{ and } (\text{diff}(\text{nil}, \text{nil}) = \text{nil}) && \text{(by setEq)} \\
 &\longrightarrow \underline{\text{nil} = \text{nil}} \text{ and } (\text{diff}(\text{nil}, \text{nil}) = \text{nil}) && \text{(by diff1)} \\
 &\longrightarrow \underline{\text{true and } (\text{diff}(\text{nil}, \text{nil}) = \text{nil})} && \text{(by equality)} \\
 &\longrightarrow \underline{\text{diff}(\text{nil}, \text{nil}) = \text{nil}} && \text{(by and)} \\
 &\longrightarrow \underline{\text{nil} = \text{nil}} && \text{(by diff1)} \\
 &\longrightarrow \text{true} && \text{(by equality)}
 \end{aligned}$$

(2) Induction case

What to show: $\text{setEqual}(x \mid l, \text{rev}(x \mid l)) = \text{true}$
 Induction hypothesis: $\text{setEqual}(l, \text{rev}(l)) = \text{true}$
 where $x \in \text{PNat}$ and $l \in \text{NatList}$.

We use case splitting for our proofs as follows:

Case 1: $\text{has}(\text{rev}(l), x) = \text{true}$.

$$\begin{aligned}
 \text{setEqual}(x \mid l, \text{rev}(x \mid l)) &\longrightarrow \underline{\text{setEqual}(x \mid l, \text{rev}(l) @ (x \mid \text{nil}))} && \text{(by rev2)} \\
 &\longrightarrow \underline{(\text{diff}(x \mid l, \text{rev}(l) @ (x \mid \text{nil})) = \text{nil})} \text{ and } && \\
 &\quad (\text{diff}(\text{rev}(l) @ (x \mid \text{nil}), x \mid l) = \text{nil}) && \text{(by setEq)}
 \end{aligned}$$

$$\begin{aligned}
&\longrightarrow (\text{diff}(\text{diff}(x \mid l, \text{rev}(l)), x \mid \text{nil}) = \text{nil}) \text{ and} \\
