Problem 5

Problem 1. $\forall L \in \texttt{NatList}, \text{size}(L) = \text{size}(\text{rev}(L))$.

Proof. By structural induction on L.

(1) Base case

What to show: $\text{size}(nil) = \text{size}(\text{rev}(nil))$.

$$\begin{aligned}
\underline{\text{size}(nil)} &\longrightarrow 0 && \text{(by size1)}\\
\text{size}(\underline{\text{rev}(nil)}) &\longrightarrow \underline{\text{size}(nil)} && \text{(by rev1)}\\
&\longrightarrow nil && \text{(by size1)}
\end{aligned}$$

(2) Induction case

What to show: $\text{size}(x \mid l) = \text{size}(\text{rev}(x \mid l))$

Induction hypothesis: $\text{size}(l) = \text{size}(\text{rev}(l))$

where $x \in \texttt{PNat}$ and $l \in \texttt{NatList}$.

$$\begin{aligned}
\underline{\text{size}(x \mid l)} &\longrightarrow \text{s}(\underline{\text{size}(l)}) && \text{(by size2)}\\
&\longrightarrow \underline{\text{s}(\text{size}(\text{rev}(l)))} && \text{(by IH)}\\
&\longrightarrow \text{size}(\text{rev}(l)) + \text{s}(0) && \text{(by Lemma 2)}\\
\text{size}(\underline{\text{rev}(x \mid l)}) &\longrightarrow \underline{\text{size}(\text{rev}(l) \mathbin{@} (x \mid nil))} && \text{(by rev2)}\\
&\longrightarrow \text{size}(\text{rev}(l)) + \underline{\text{size}(x \mid nil)} && \text{(by Lemma 1)}\\
&\longrightarrow \text{size}(\text{rev}(l)) + \text{s}(\underline{\text{size}(nil)}) && \text{(by size2)}\\
&\longrightarrow \text{size}(\text{rev}(l)) + \text{s}(0) && \text{(by size1)}
\end{aligned}$$

□

Lemma 1. $\forall L1, L2 \in \texttt{NatList}, \text{size}(L1 \mathbin{@} L2) = \text{size}(L1) + \text{size}(L1)$.

Proof. By structural induction on $L1$.

(1) Base case

What to show: size(nil @ $l2$) = size(nil) + size($l2$)
where $l2 \in$ `NatList`.

$$
\begin{aligned}
\text{size}(\underline{nil \mathbin{@} l2}) &\longrightarrow \text{size}(l2) && \text{(by @1)} \\
\underline{\text{size}(nil)} \mathbin{@} \text{size}(l2) &\longrightarrow \underline{0 + \text{size}(l2)} && \text{(by size1)} \\
&\longrightarrow \text{size}(l2) && \text{(by +1)}
\end{aligned}
$$

(2) Induction case

What to show: size((x | $l1$) @ $l2$) = size(x | $l1$) + size($l2$)
Induction hypothesis: size($l1$ @ $l2$) = size($l1$) + size($l2$)
where $x \in$ `PNat`, and $l1, l2 \in$ `NatList`.

$$
\begin{aligned}
\text{size}(\underline{(x \mid l1) \mathbin{@} l2}) &\longrightarrow \underline{\text{size}(x \mid (l1 \mathbin{@} l2))} && \text{(by @2)} \\
&\longrightarrow \text{s}(\underline{\text{size}(l1 \mathbin{@} l2)}) && \text{(by size2)} \\
&\longrightarrow \text{s}(\text{size}(l1) + \text{size}(l2)) && \text{(by IH)} \\
\underline{\text{size}(x \mid l1)} + \text{size}(l2) &\longrightarrow \underline{\text{s}(\text{size}(l1)) + \text{size}(l2)} && \text{(by size2)} \\
&\longrightarrow \text{s}(\text{size}(l1) + \text{size}(l2)) && \text{(by +2)}
\end{aligned}
$$

□

Lemma 2. *$\forall X \in$ `PNat`$, \text{s}(X) = X + \text{s}(0)$.*

Proof. By structural induction on X.

(1) Base case

What to show: $\text{s}(0) = 0 + \text{s}(0)$.

$$
\underline{0 + \text{s}(0)} \longrightarrow \text{s}(0) \qquad \text{(by +1)}
$$

(2) Induction case

What to show: $\text{s}(\text{s}(x)) = \text{s}(x) + \text{s}(0)$
Induction hypothesis: $\text{s}(x) = x + \text{s}(0)$
where $x \in$ `PNat`.

$$
\begin{aligned}
\underline{\text{s}(x) + \text{s}(0)} &\longrightarrow \text{s}(\underline{\text{s}(x) + 0}) && \text{(by Lemma 7 from Problem 1)} \\
&\longrightarrow \text{s}(\text{s}(x)) && \text{(by Lemma 6 from Problem 1)}
\end{aligned}
$$
